

## **5 Ports Pogo Pin Charging Station - Efficient Charging for Mobile Payment Devices**

Goochain's 5-device magnetic charging station is engineered for demanding business environments such as restaurants, cafés, and hospitality venues. With five independent charging bays, this multi-unit POS charging cradle is perfect for teams using mobile checkout equipment or wireless billing terminals.

Built with spring-loaded contact pins, it eliminates the wear and tear common with USB or Type-C connectors. The compact form factor is ideal for use as a countertop charging rack, easily placed at cashier stations or service desks. Its plug-and-play operation makes it compatible with a wide range of touchscreen payment devices, especially those used by waitstaff or field agents.

Unlike traditional docking bases, this product functions as a multi-slot smart charging hub, offering better alignment and secure contact for each device. It's an excellent choice for businesses upgrading from legacy payment terminal docking solutions or integrating fleet charging trays into their operation.

Additionally, the durable ABS+PC housing makes it suitable for environments that require industrial-grade charging docks for handheld transaction systems or retail order scanners.
