

Product Overview:

The 60-Port [USB Charging Station](#) is an industrial-grade desktop charger that provides efficient power delivery across 60 devices at once. Designed with dual fast charging protocols (PD & QC3.0), this charging hub supports a total output of 300W, with automatic device detection and current distribution via smart IC chips.

The two-part modular construction includes a high-efficiency main charging board and a flame-retardant aluminum alloy shell with ventilation and a built-in cooling fan. An integrated power switch ensures safe operation and easy control.

Except 60 Ports charging station, we also can make [20 Ports 100W USB Charging Station](#), 30 Ports, 40Ports, welcome to contact us for more models.

Suitable for high-traffic commercial environments such as office workstations, fitness centers, education facilities, and customer charging zones in restaurants and public kiosks, this unit is a reliable solution for multi-device power management.

As a certified manufacturer, we offer OEM/ODM services including port configuration customization, shell design, and private labeling, serving global clients with stable supply and factory-direct

pricing.
