

Product Description

The [**wall-mounted 360-degree swivel POS stand**](#) is engineered to improve customer experience and workspace efficiency in high-traffic commercial environments such as retail stores, restaurants, cafés, and supermarkets.

The rotating and tilting structure allows the POS terminal to be easily turned toward the customer for payment confirmation, PIN input, or signature, and then rotated back toward staff for order processing. The strong metal arm and reinforced joints ensure long-term stability even with frequent daily use.

As a professional POS accessory manufacturer, we offer full customization services including structural modifications, mounting dimensions, surface treatment, logo printing, and packaging design. Whether you need a universal version or a model adapted to your specific POS terminal, our R&D team can support your project from concept to mass production.

This [**POS mount**](#) helps reduce counter clutter, improve operational efficiency, and enhance the professional appearance of checkout areas.

Applications

- Retail checkout counters
- Restaurant ordering and payment stations
- Hotel front desks
- Supermarkets & convenience stores
- Self-service payment kiosks

OEM / ODM Capability

- In-house mechanical and structural design team
